

## ***CLAIMS***

The following is a copy of Applicant's claims that identifies language being added with underlining ("\_\_\_") and language being deleted with strikethrough ("—"), as is applicable:

1. (Previously Presented) A polymer composition, comprising:  
a photodefinable polymer including a sacrificial polymer and a photoinitiator.
2. (Previously Presented) The polymer composition of claim 1, wherein the photoinitiator is a negative tone photoinitiator.
3. (Previously Presented) The polymer composition of claim 1, wherein the photoinitiator is a positive tone photoinitiator.
4. (Previously Presented) The polymer composition of claim 1, wherein the sacrificial polymer is selected from polynorbornenes, polycarbonates, polyethers, polyesters, functionalized compounds of each, and combinations thereof.
5. (Previously Presented) The polymer composition of claim 1, wherein the sacrificial polymer includes polynorbornene.
6. (Currently Amended) The polymer composition of claim ~~3~~ 5, wherein the polynorbornene includes alkenyl-substituted norbornene.
7. (Previously Presented) The polymer composition of claim 1, wherein the photoinitiator is a free radical generators.

8. (Currently Amended) The polymer composition of claim 3 1, wherein the photoinitiator is selected from, bis(2,4,6-trimethylbenzoyl)-phenylphosphineoxide, 2-benzyl-2-dimethylamino-1-(4-morpholinophenyl)-butanone-1, 2,2-dimethoxy-1,2-diphenylethan-1-one, 2-methyl-1[4-(methylthio)- phenyl]-2-morpholinopropan-1-one, 2-methyl-4'-(methylthio)-2-morpholino-propiophenone, benzoin ethyl ether, and 2,2'-dimethoxy-2-phenyl-acetophenone, and combinations thereof.
9. (Previously Presented) The polymer composition of claim 1, wherein the photoinitiator is selected from, bis(2,4,6-trimethylbenzoyl)-phenylphosphineoxide and 2-benzyl-2-dimethylamino-1 -(4-morpholinophenyl)-butanone-1.
10. (Previously Presented) The polymer composition of claim 1, wherein the sacrificial polymer is about 1 to 30% by weight percent of the photodefinable polymer, wherein the photoinitiator is from about 0.5 to 5% by weight of the photodefinable polymer, wherein the polymer composition further comprises a solvent, wherein the solvent is about 65% to 99% by weight percent of the photodefinable polymer.
11. (Previously Presented) A method for fabricating a structure, comprising:
  - disposing a photodefinable polymer composition onto a surface, wherein the photodefinable polymer includes a sacrificial polymer and a photoinitiator selected from a negative tone photoinitiator and a positive tone photoinitiator;
  - disposing a gray scale photomask onto the photodefinable polymer, wherein the gray scale photomask encodes an optical density profile defining a three-dimensional structure to be formed from the photodefinable polymer;
  - exposing the photodefinable polymer through the gray scale photomask to optical energy; and
  - removing portions of the photodefinable polymer to form the three-dimensional structure of cross-linked photodefinable polymer.

12. (Previously Presented) The method of claim 11, wherein removing includes:  
removing unexposed portions of the photodefinable polymer composition to form the three-dimensional structure.
13. (Previously Presented) The method of claim 11, wherein removing includes:  
removing exposed portions of the photodefinable polymer composition to form the three-dimensional structure.
14. (Previously Presented) The method of claim 11, further comprising:  
disposing an overcoat layer onto the three-dimensional structure; and  
decomposing the photodefinable polymer composition, thermally, to form a three-dimensional air-region.
15. (Original) The method of claim 14, wherein decomposing includes:  
maintaining a constant rate of decomposition as a function of time.
16. (Original) The method of claim 14, wherein decomposing includes:  
maintaining a constant rate of mass loss of the photodefinable polymer.
17. (Original) The method of claim 14, wherein decomposing includes:  
heating the structure according to the thermal decomposition profile expression

$$T = \frac{E_a}{R} \left[ \ln \frac{A(1-rt)^n}{r} \right]^{-1}$$

where  $R$  is the universal gas constant,  $t$  is time,  $n$  is the overall order of decomposition reaction,  $r$  the desired polymer decomposition rate,  $A$  is the Arrhenius pre-exponential factor, and  $E_a$  is the activation energy of the decomposition reaction.

18. (Original) The method of claim 11, wherein the three-dimensional structure has a spatially-varying height.

19. (Original) A structure, comprising the three-dimensional structure formed using the method of claim 11.
20. (Original) A structure, comprising the three-dimensional air-region formed using the method of claim 14.
21. (Original) A structure, comprising the three-dimensional air-region formed using the method of claim 15.
22. (Original) A structure, comprising the three-dimensional air-region formed using the method of claim 17.
23. (Withdrawn) A method of decomposing a polymer, comprising:
  - providing a structure having a substrate, an overcoat layer, and a polymer in a defined area within the overcoat layer;
  - maintaining a constant rate of decomposition as a function of time;
  - removing the polymer from the area to form an air-region in the defined area.
24. (Withdrawn) The method of claim 23, wherein maintaining includes:
  - heating the structure according to the thermal decomposition profile expression

$$T = \frac{E_a}{R} \left[ \ln \frac{A(1-rt)^n}{r} \right]^{-1}$$

where  $R$  is the universal gas constant,  $t$  is time,  $n$  is the overall order of decomposition reaction,  $r$  the desired polymer decomposition rate,  $A$  is the Arrhenius pre-exponential factor, and  $E_a$  is the activation energy of the decomposition reaction.

25. (Withdrawn) A structure, comprising:
- a substrate;
  - an air-region area having a spatially-varying height; and
  - an overcoat layer disposed onto a portion of the substrate and engaging a substantial portion of the air-region area.
26. (Withdrawn) The structure of claim 25, wherein the air-region area has a non-rectangular cross-section.
27. (Withdrawn) The structure of claim 25, wherein the air-region area has an asymmetrical cross-section.
